Assignment -5

Aim: Develop a web app for Employee Registration using JSP, Servlet, & JDBC.

Objectives:
- To understand server side scripting
- To understand concept of servlet & JSP
- To learn working of servlet & JSP
- To learn database connectivity using JSP.

Theory:

1. Servlet

Servlet is a server-side java program that handles client requests & generates dynamic response. It runs on a web server like Tomcat.

2. JSP

JavaServerPages (JSP) is a server-side tech used to create dynamic web pages using HTML with embedded java code.

3. Database connectivity

It is achieved by using JDBC, enables apps to interact with databases like MySQL, using SQL queries.

Platform: JSP- 2.2+ / Apache Tomcat -8.5 / Servlet API - 2.5

Conclusion: Thus, studied & implemented servlets, JSP & database connectivity.

FAQs

1. Difference b/w servlet & JSP.

Solⁿ:

Servlet	JSP
• Java code	• HTML + Java
• Logical	• focuses on presentation
• Complex UI	• Easy UI
• Faster	• Slightly slower

2. What are advantages of JSP?

Solⁿ:

1. Easy UI design
2. Less coding
3. Reusable tags
4. Fast development
5. Auto compilation.

3. What is the diff b/w GET & POST?

Solⁿ:

GET	POST
• Limited size	• unlimited
• Low security	• Stronger
• Faster	• Slower
• Fetches data	• Send sensitive data.

4. Diff. b/w Generic Servlet & HttpServlet.

Solⁿ:

GenericServlet	HttpServlet
• Independent protocol	• HTTP only
• Flexible	• web-specific
• Less efficient	• More practical
• service()	• doGet(), doPost()

5. What are the components of JDBC?

Solⁿ:

i) DriverManager

ii) connection

iii) Statement

iv) Result Set

v) Driver.
